Actionspace as Hyperparameter

- Large Actionspace $\rightarrow$ hard to explore
- Especially sequences of actions hard

Actionspace as Hyperparameter

- ▶ Large Actionspace → hard to explore
- ▶ Especially sequences of actions hard
- → Weed out bad actions by hand
- → Disable/Enable actions via some kind of HPO [M.-J. Kim, J. S. Kim, and Ahn 2023] (here EA)
- → Give agent whole action-sequences [M.-J. Kim, J. S. Kim, Lee, et al. 2019] (here mostly done by hand + some EA)
- → e.g. flipping LunarLander in our ContinualRL problem

Actionspace as Hyperparameter

- ▶ Large Actionspace → hard to explore
- ▶ Especially sequences of actions hard
- → Weed out bad actions by hand
- → Disable/Enable actions via some kind of HPO [M.-J. Kim, J. S. Kim, and Ahn 2023] (here EA)
- → Give agent whole action-sequences [M.-J. Kim, J. S. Kim, Lee, et al. 2019] (here mostly done by hand + some EA)
- → e.g. flipping LunarLander in our ContinualRL problem
- ▶ Search Space grows larger, but Agents (hopefully) easier to train
